Dear Mr. Hughes:

Regarding your July 17, 1978, letter and the two new requirements that you have mentioned regarding our plant, we will need additional time to complete item number one which is the diked area since it will require us moving many many drums and will mean a great deal of expense to us.

Regarding item two we are installing an evaporation system that will take care of this and we will keep a hydrometerorological record as you suggested. The winter water usage is much lower than the summer due to fewer acid sales.

Please be assured we are anxious to comply with both of these as we have been with other requirements in the past and shall appreciate your staying in close contact with us.

Very truly yours,

THE REID SUPPLY CO.
